### Office Action

#### Rejections Under 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6, and 9-28 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Loopstra et al(WO 99/28790) in view of Kawashima et al(5,117,254).

Loopstra et al teach an exposure apparatus comprising an exposure source(LA), mask(MA), projection lens system(PL), wafer substrate(W), and stage(WH). The exposure system includes a first sensor system(40-46) which controls the focus of the projection system by measurement the axial position of the substrate in relation to the projection lens system. A second sensor system includes an X-Y interferometer system(figure 4) which includes reflecting a beam from the stage(WH) and an inclined reflective surface(159) on the stage and a reflector(163) mounted to the projection optical system such that a second beam is reflected by the inclined reflector(159) to the mirror(163). See figures 5-8. Not taught is the use of a separate reference plate reflector mounted on the substrate stage.

Kawashima et al teach the use of a reference reflector mounted on the substrate stage of the exposure system with is used by the focus control(first sensor system). Kawashima further teaches that the reference reflector or the wafer surface can be used by the focus control.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to include a reference reflector on the substrate stage for the first sensor system, the focus system, as taught by Kawashima et al. Clearly when the projection optical system is positioned over the reference reflector both the first and second sensor systems will be in a predetermined position.

#### **Response to Arguments**

Applicant's arguments with respect to claims 1-6, and 9-28 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for response to this final action is set to expire **THREE MONTHS** from the date of this action. In the event a first response is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event will the statutory period for response expire later than **SIX MONTHS** from the date of this final action.
